

ENHANCING RESTORATIVE RESULTS:

SOFT TISSUE GRAFTING

*Embarrassed by **recession** around a recently placed **crown** in the **esthetic zone**?*

*Faced with **exposed roots** that are`
esthetically undesirable or sensitive?*

Learn evidence-based solutions for the **soft tissue challenges** you face on a daily basis, and how to cover those exposed roots and predictably stop recession. In this workshop, methods are illustrated to solve those problems and enhance your restorative results. Gain **peace of mind** knowing the gingiva stays in place by the margins of newly placed esthetic crowns.

Participants will experience an in-depth look at the concepts and practical applications for both **Free Gingival and Connective Tissue Grafts**.

- Gingival Grafts create zones of attached gingiva where neither root coverage nor esthetics are factors. They provide a *predictable way to stop recession* from progressing.
- Connective Tissue Grafts are useful for total root coverage in *cases of severe recession*, especially in the maxilla where esthetics are important.

The full day workshop offers the opportunity to **practice both procedures on pig jaws**.

This workshop is for dentists who want to offer soft tissue grafting or learn more about enhancing esthetic restorative results. The course includes hands-on exercises and many case illustrations, plus two surgical videos of the grafting procedure will be shown.

PARTICIPANTS WILL LEARN:

- Diagnostic criteria for each graft
- To gain root coverage
- To predictably **stop** recession, or to **prevent** it in the esthetic zone
- Step-by-step harvesting, placing and suturing
- Step-by-step use of specialized instruments

Workshop participants receive a workbook detailing the procedures.

**Full Day Lecture/Workshop
or Half Day Lecture**
